

Maths Investigations Skill Check

The Maths Investigations skill check tool allows children to take responsibility for their own marking.

This means that:

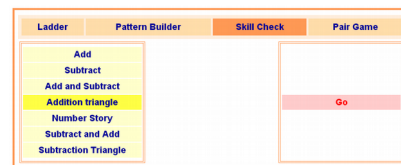

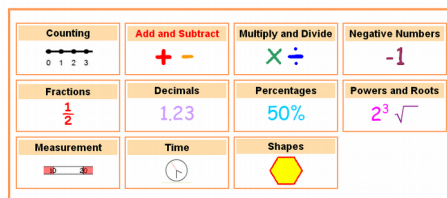

- (1) they get instant feedback as they go along, so they don't end up with pages of wrong answers.
- (2) you get their work handed in already marked!

Unlike a calculator, the skill check does not work the correct answer out for you. It simply tells you whether the calculation is right or wrong. If it is wrong you then need to do more thinking, correct your error and then check again to see if you are right this time.

The skill check is best accessed using a tablet, which children can have on their desk alongside their work. A group of children can share one tablet and take turns checking their answers.

You find the skill check on the Maths Investigations web site by clicking on the skill check button. (a single class login is sufficient for this - you don't need individual pupil logins). You choose a topic and an option from the list and then click Go.

You then get a page where you can put in any calculations you want to check. Simple!
